

# GREEN INFRASTRUCTURE STRATEGY

The Green Infrastructure Strategy seeks to form a network of multi-purpose greenspaces for both people and wildlife to thrive – through the use of existing open space and the creation of new ones.

The Council wants to know your views about the proposals which will form part of ongoing work with communities, and other important partners such as the Conservators of Epping Forest and Natural England.

The strategy and its projects focus on improving greenspace and water networks in the District. Projects span across all scales – from the high-level strategies to community-based projects, from long term initiatives to short term schemes.

We hope you can take the time to read about it and give us some feedback - including some of your own project ideas.
